PROFESSIONAL SUMMARY

Senior Software Engineer with 4+ years architecting scalable, high-performance frontend systems for fintech/payments platforms at Visa Inc. Deep expertise in React, TypeScript, and modern frontend architecture (Nx monorepos, TanStack Query/Router, React Hook Form, Zod, Tailwind CSS, Shadcn UI), with working knowledge of Java/Spring Boot backend services. Delivered merchant-facing features across three concurrent product squads, led development of a global merchant portal's Virtual Terminal and API Keys modules, drove 50% business growth, and improved rendering performance by 55%.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Java, SQL, C++

Frontend: React 19, Redux/Redux Toolkit, TanStack Query/Router, React Hook Form, Zod, Tailwind CSS, Shadcn UI, HTML5/CSS3, Visa Nova Design System (VPDS)

Architecture & Testing: Nx Monorepo, Component-Driven Development, Shared Component Libraries, Vitest, Playwright, Jest, MSW, Storybook, SonarQube, Checkmarx SAST

Backend (working knowledge): Spring Boot, JPA/Hibernate, Node.js, REST APIs, JWT Authentication, MySQL

DevOps & AI Tools: Docker, Jenkins, ArgoCD, Git, GitHub Enterprise, CI/CD, Vite, PNPM, Webpack | GitHub Copilot, Claude Code, Visa MCP Hub

PROFESSIONAL EXPERIENCE

Senior Software Engineer — Visa Inc.

Jun 2024 – Present | Bengaluru, India

- Led frontend development of the Virtual Terminal (Take Payment) and API Keys modules for Visa's Authorize.Net international merchant portal (APEX), built on React 19, TypeScript, and Vite within a large-scale Nx monorepo, enabling merchants across global markets to process payments and securely manage API credentials.
- Architected real-time transaction tracking and merchant engagement features (Manage Transactions module) enabling merchants to view, search, and filter payment transactions, contributing to 50% business growth.
- Owned ~30% of a large-scale React/TypeScript codebase within an Nx monorepo, leveraging Redux, TanStack Query, and shared component libraries; improved frontend rendering performance by 55%.
- Built reusable, modular UI components with React, Tailwind CSS, and Shadcn UI, cutting duplication across three concurrent product squads (merchant and partner).
- Delivered a QuickBooks accounting integration and multi-currency support, building React/TypeScript frontends for financial reconciliation and locale-aware rendering.
- Developed a CSV-based batch/bulk upload interface and settlement/reconciliation reporting screens for merchant financial data, plus onboarding flows (KYC capture, multi-step registration) using React Hook Form and Zod.
- Contributed as part of the team that built Visa's internal AI chat tool (MCP Hub) using Claude and Cline APIs — an in-house equivalent to ChatGPT/Claude for internal use; adopted GitHub Copilot and Claude Code to accelerate development.

Software Engineer — Visa Inc.

Jun 2022 – Jun 2024 | Bengaluru, India

- Built a secure, responsive payment product (Authorize.net) in React and JavaScript, enabling merchants to accept credit card, eCheck, and other payment methods with real-time sales visibility.
- Designed and shipped notification and OTP authentication services delivering real-time transaction alerts and secure account access; built Merchant ID (MID) and Terminal ID (TID) management services with Java, Spring Boot, JPA/Hibernate, and MySQL.

ACHIEVEMENTS

- 3rd Place, Visa Hackathon — built a chatbot that automated internal support workflows

EDUCATION

Master of Computer Applications — NIT Tiruchirappalli, CGPA: 8.7

Bachelor of Computer Applications — DAVV Indore, CGPA: 6.6
