

AMOL GUPTA

Senior Software Engineer — Frontend (React/TypeScript)

Bengaluru, India | gupta07amol@gmail.com | +91-9340434307 | LinkedIn: linkedin.com/in/amol-deep-gupta-bb9328117 | GitHub: github.com/amolgupta7 | Portfolio: amolgupta7.github.io/Portfolio

PROFESSIONAL SUMMARY

Senior Software Engineer with 4+ years architecting scalable, high-performance frontend systems for fintech/payments platforms at Visa Inc. Deep expertise in React, TypeScript, and modern frontend architecture (Nx monorepos, TanStack Query/Router, React Hook Form, Zod, Tailwind CSS, Shadcn UI), with working knowledge of Java/Spring Boot backend services. Delivered merchant-facing features across three concurrent product squads, led development of a global merchant portal's Virtual Terminal and API Keys modules, drove 50% business growth, and improved rendering performance by 55%.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Java, SQL, C++

Frontend: React 19, Redux/Redux Toolkit, TanStack Query/Router, React Hook Form, Zod, Tailwind CSS, Shadcn UI, HTML5/CSS3, Visa Nova Design System (VPDS)

Architecture & Testing: Nx Monorepo, Component-Driven Development, Shared Component Libraries, Vitest, Playwright, Jest, MSW, Storybook, SonarQube, Checkmarx SAST

Backend (working knowledge): Spring Boot, JPA/Hibernate, Node.js, Fastify, REST APIs, JWT Authentication, MySQL

DevOps & AI Tools: Docker, Jenkins, ArgoCD, Git, GitHub Enterprise, CI/CD, Vite, PNPM, Webpack | GitHub Copilot, Claude Code, Visa MCP Hub

PROFESSIONAL EXPERIENCE

Senior Software Engineer — Visa Inc.

Jun 2024 – Present | Bengaluru, India

- Led frontend development of the Virtual Terminal (Take Payment) and API Keys modules for Visa's Authorize.Net international merchant portal (APEX), built on React 19, TypeScript, and Vite within a large-scale Nx monorepo, enabling merchants across global markets to process payments and securely manage API credentials.
- Designed and implemented payment form flows and API key lifecycle management (create, view, revoke), integrating typed REST API clients with Unified Payments (UP), PTS, and UMS backend microservices on the Visa Acceptance Platform (VAP); enforced role-based access control and feature-flag-controlled zero-downtime releases.
- Maintained code quality and security compliance through automated SonarQube static analysis, Checkmarx SAST scanning, and Playwright E2E coverage (98%+ on core modules), adhering to Visa's Six Golden Rules for all production change requests.
- Architected real-time transaction tracking and merchant engagement features (Manage Transactions module) enabling merchants to view, search, and filter payment transactions, contributing to 50% business growth.
- Owned ~30% of a large-scale React/TypeScript codebase within an Nx monorepo, leveraging Redux, TanStack Query, and shared component libraries; improved frontend rendering performance by 55%.
- Built reusable, modular UI components with React, Tailwind CSS, and Shadcn UI aligned to the Visa Nova Design System (VPDS), cutting duplication across three concurrent product squads (payments, onboarding, fraud decisioning).
- Delivered a QuickBooks accounting integration and multi-currency support, building React/TypeScript frontends for financial reconciliation and locale-aware rendering.
- Developed a CSV-based batch/bulk upload interface and settlement/reconciliation reporting screens for merchant financial data, plus onboarding flows (KYC capture, multi-step registration) using React Hook Form and Zod.
- Built UI components for 3-D Secure (3DS) payer authentication and merchant risk/fraud decisioning workflows aligned to EMVCo protocol requirements; automated testing with Vitest and Playwright.
- Contributed as part of the team that built Visa's internal AI chat tool (MCP Hub) using Claude and Cline APIs — an in-house equivalent to ChatGPT/Claude for internal use; adopted GitHub Copilot and Claude Code to accelerate development.

Software Engineer — Visa Inc.

Jun 2022 – Jun 2024 | Bengaluru, India

- Built a secure, responsive payment product (Authorize.net) in React and JavaScript, enabling merchants to accept credit card, eCheck, and other payment methods with real-time sales visibility.
- Designed and shipped notification and OTP authentication services delivering real-time transaction alerts and secure account access; built Merchant ID (MID) and Terminal ID (TID) management services with Java, Spring Boot, JPA/Hibernate, and MySQL.

ACHIEVEMENTS

- 3rd Place, Visa Hackathon — built a chatbot that automated internal support workflows

EDUCATION

Master of Computer Applications — NIT Tiruchirappalli, CGPA: 8.7

Bachelor of Computer Applications — DAVV Indore, CGPA: 6.6
